Measurements of combustion/heating of a variety of biological fuels were carried out, including ethanol/gasoline mixtures, biodiesel/diesel mixtures, corn and wood combustion in residential stoves, and meat cooking on a variety of appliances.
- **AEROWOOD:** Roveredo, GR, Switzerland, November – December, 2005: This experiment, one of many AEROWOOD campaigns, sought to measure the contribution of wood smoke and vehicle emissions to wintertime pollution in a narrow alpine valley. The Carleton ATOFMS was brought to Switzerland for these measurements.
- **MS-ChAOS:** Paul Scherrer Institute, Villigen AR Switzerland, October – November, 2005: This experiment deployed 8 mass spectrometers to measure the chemical characteristics of the secondary organic aerosol formed in the smog chamber at the Paul Scherrer Institute. The Carleton ATOFMS was brought to Switzerland for these measurements.
- **Mercury Roadshow 3:** Mt. Horeb, WI, August 2004. This experiment, continued the Mercury Roadshow experiments described below. Data was obtained with the ATOFMS and the real-time mercury instrument, co-located on a farm in rural Mt. Horeb, WI. This data will also be provided to the data mining team.
- **Mercury Roadshow 2/Data Mining:** East St. Louis, MO, December 2003 – March 2004. This experiment followed on the Mercury Roadshow experiments in CO and Yellowstone National Park, and was carried out in collaboration with the University of Wisconsin-Madison Environmental Chemistry and Technology program (PI J. J. Schauer) and the United States Geological Survey, Middleton, WI office (PI D. Krabbenhoft) acquired real time speciated mercury data alongside real time particulate monitors, including Carleton College's ATOFMS, to evaluate the speciation and transformation of anthropogenic mercury emissions in a polluted urban area. The assistance of Professor Jay R. Turner, Washington University, was invaluable in running the instrument. The data set will also be used to provide input into the data mining program being created by collaborators Musicant and Ramakrishnan.
- **Mercury Roadshow:** Southwestern Colorado and Yellowstone National Park, August – September, 2003. This experiment, organized by members of the University of Wisconsin-Madison Environmental Chemistry and Technology program (PI J. J. Schauer) and the United States Geological Survey, Middleton, WI office (PI D. Krabbenhoft) acquired real time speciated mercury data alongside real time particulate monitors, including Carleton College's ATOFMS and EC/OC monitors, to evaluate the speciation and transformation of anthropogenic and biogenic mercury emissions.
- **Atlanta ANARChE 2002:** Atlanta, GA July – August, 2002: The Atlanta Aerosol Nucleation and Real-time Characterization Experiment (ANARChE) included the two ATOFMS instruments in which Carleton has a stake, and was funded with a grant from the National Science Foundation to a collaborative team from the University of Minnesota Department of Mechanical Engineering and Carleton College. Studies of the ambient air were performed with the standard ATOFMS instrument (Carleton College) and a modified instrument which analyzed physically classified particles (Carleton College and University of Minnesota).

- **Diesel Engine Laboratory Study:** University of Wisconsin, Madison, WI. March – April, **2002:** The first field deployment of Carleton College’s ATOFMS instrument, funded with a grant from the National Science Foundation. Schauer in the Environmental Technology and Chemistry Program at the University of Wisconsin, Madison.)
- **Automobile/Heavy Vehicle Emissions Characterization Study:** Caldecott Tunnel, Berkeley, CA. July-August, **2000:** A return to the site of the 1997 study (mentioned below) to better characterize vehicle emissions on a single-particle basis, and to compare results with those obtained from multiple other instruments as well as vehicle fleet statistics. (Carleton College in collaboration with the University of California, Riverside.)
- **EPA/SOS SuperSite Study:** Atlanta, GA, August **1999:** The first of the EPA sponsored SuperSite locations, which brought together researchers from ~40 institutions to measure particulate matter in traditional and new ways, including the single-particle mass spectrometric methods. Goals are to establish rigorous method intercomparisons and to better understand particulate matter dynamics in a polluted urban area. (Carleton College in collaboration with the University of California, Riverside.)
- **Automobile/Heavy Vehicle Emissions Characterization Study:** California Air Resources Board Haagen-Smit Laboratory, El Monte, CA. July, **1998:** Sampling selected light and heavy duty vehicles running under identical conditions on a chassis dynamometer, to obtain characteristic single-particle information for each vehicle type. Comparisons with bulk particulate matter analyses are also possible.
