Alumni Profile

Sammy Morin, Class of 2009

Since graduation, I have been working as an Analyst at Analysis Group, an economic consulting firm headquartered in Boston, MA. My work at AG mainly consists of supporting expert witnesses from top business schools retained on large litigations; my role is to assist in research, data analysis, and preparation of expert reports. My math major has been integral in getting me to where I am today. Having the ability to easily learn statistical programs, such as SAS, analyze large amounts of data, and build regression models is vital to success as an Analyst at AG.

Although you probably won’t use most of the math that you’ve learned at Carleton in a business career, the major itself serves as a great signal of your intelligence to potential employers. My first piece of advice to students looking for jobs in a business-related field would be to get in touch with as many alumni as possible. Use the Alumni Directory to find grads in your target field and call or e-mail them – they are usually very eager to help and can get your resume to the right people. My second piece of advice is to get as much professional experience as possible before you apply for a full-time job. I have been very involved with hiring new Analysts at AG recently, and we place a lot of importance on relevant work experience. Don’t be afraid to take an unpaid internship if you think it will help your prospects for a full-time career.
